

Talend Data Fabric Now Certified on MapR Converged Data Platform

March 29, 2017

Winter '17 Version of Talend's Data Integration Platform is Industry's First to Support MapR Streams

REDWOOD CITY, Calif.--(BUSINESS WIRE)--Mar. 29, 2017-- [Talend \(NASDAQ:TLND\)](#), a global leader in [cloud](#) and [big data](#) integration software, today announced that the newest version of its Talend Data Fabric integration solution has been certified on the [MapR Converged Data Platform](#), which includes [MapR-FS](#), [MapR-DB](#) and [MapR Streams](#). This accreditation enables Talend and MapR to help customers increase agility and accelerate time-to-value for enterprise-scale big data workflows.

"The integration of Talend on MapR provides our customers with a modern data architecture capable of tackling multiple big data workloads simultaneously, while speeding time-to-market and increasing developer productivity," said Mike Pickett, vice president of business development and partner ecosystems, Talend. *"Together, Talend and MapR solutions can meet all customers' application and data integration needs, in order to transform stores of corporate data into real-time business insights."*

The [MapR Converged Data Platform](#) is the industry's only enterprise-grade software solution that unifies big data and open source technologies with fast, native access to global event streaming, real-time database capabilities, and web-scale storage. [Talend Data Fabric](#) is the industry's first integration platform to natively support MapR Streams, which helps customers continuously synchronize event processing across databases as information is updated, delivering accurate insight in real-time.

Together, Talend and MapR provide a unified, open source-based, converged data storage and management platform for different application needs that enables organizations to use big data in powerful new ways to drive innovation and further their digital transformations.

"When you combine the data ingestion and integration power of Talend Data Fabric with the MapR Converged Data Platform, joint customers can significantly improve the time to market for big data applications," said Geneva Lake, vice president, alliances and channels, MapR Technologies. "To get the most ROI out of any big data implementation, IT leaders need a modern, agile IT environment that can keep pace with rapidly changing market demands. Our joint platform will help customers both maximize the benefit and simplify management of next-generation cloud and big data applications."

MapR product certification is part of the [MapR Converge Partners Program](#) and makes it easy for customers to identify partner products certified to work with MapR. Customers can use these products and solutions to lower project risks and realize cost savings over custom built solutions. With hundreds of members worldwide, the MapR Converge Partners Program includes best-of-breed partners with the shared commitment to bring the best expertise and business solution for each unique customer need.

To ease adoption of the combined Talend and MapR platforms, the companies are collaborating on a virtual Sandbox that will provide customers with a pre-configured, easy-to-use, no-risk environment for experimenting with real-time and batch big data processing and integration technologies. The forthcoming Sandbox will enable *developers with limited big data experience to go hands-on with the latest data integration and acceleration technologies*—no hand coding required—so they *can better understand the end-to-end lifecycle and ultimately increase the value of any big data project*.
